SECURITY Carrier is state-of-the-art in transportation for tube systems NW110 which meets all user requirements. This carrier type combines convenience of a swivel lid opening mechanism with the same high security features of a flip top carrier. Equipped with several, advantageous security features the carrier is protected against unauthorized access.

Security swivel top closure

Ergonomic designed swivel top on both sides can be easily opened by one hand and ensures reliable, safe transportation.

Advanced tracking by RFID technology

SECURITY CASH Carrier can optionally be equipped with free-programmable data transponder (RFID technology) at each side for unidirectional use. This advanced RFID carrier tracking allows for identification, documentation and monitoring of each single carrier within a pneumatic carrier system.

Labelling for better management of carriers

For additionally identification and assignment number sign labels can be stuck on the top, on the side and circumferentially around the carrier.

Fraud prevention by sealable lock

For advanced security and to prevent unauthorised access to the contents such as drugs, confidential documents, the closure lid can be sealed with security sealing clip which locks the opening mechanism. The clip has to be broken to reopen the carrier.

ID label for better management of carrier

For additional identification and assignment ID number signs can be placed on top, on side and circumferentially around the carrier. Recessed label base features high scratch-resistance quality.

Higher payload ensured by Velcro rings

Wide carrier Velcro® rings ensure smooth, gentle soft-landing and permit higher payload.
